P Pump Combines Durability, Reliability & Flexibility

DELAVAN, WI (2003) –BRAN+LUEBBE - Bran+Luebbe, a leading manufacturer of metering pumps and systems, is marketing a pump which combines durability, reliability and flexibility – the P Pump. Designed for 24-hour continuous service, the P Pump handles pressures up to 15,000 psig. Stroke lengths are infinitely variable between zero and 100% maximum capacity, making the P Pump ideal for continuous as well as batch production. The P Pump has proven, long running market applications in food, pharmaceutical, personal care, pulp, paper, textile, plastics, general chemical and oil and gas industries.

To distinguish the long-term reliability of their metering pumps, Bran+Luebbe now offers an unprecedented **10-year warranty** on the gearbox of its P Pump. An extended 2 year warranty is also being offered on the P Pump's diaphragm. These warranties are available in the U.S., Canada and Mexico.

A simple, rugged gearbox design is behind the P Pump's durability. It offers less wear, higher operational reliability and longer service life. Cross contamination of process fluid and gear oil is eliminated because the gearbox is completely isolated from the pumphead.

Double diaphragms for double protection are another design advantage of the P Pump. Available in either PTFE or stainless steel, the double diaphragm eliminates catastrophic shutdowns. A simple and reliable rupture gauge is standard, while an optional alarm is also available.

The modular "building block" design allows any combination of drive, gears and pumpheads, as well as stroke lengths. This flexibility permits multiple pumps to run through a common drive while enabling quick modifications, upgrades and expansions to be made to existing systems.

For more information about the Bran+Luebbe P Pump product line, contact Mary Hermanson at 800-252-5200, or e-mail: info.usa@bran-luebbe.com.
